

**CUREABLE SILANE SEALANT FUNCTIONALIZED SEALANT  
COMPOSITION AND MANUFACTURE OF SAME**

**ABSTRACT**

The present invention is directed to a method of forming a polymer composition having quaternary alkane units and aromatic hydrocarbon units. The aromatic hydrocarbon units have substituents of the general formula  $R^1SiR^2R^3R^4$ , wherein  $R^1$  is optional and is a hydrocarbon or ether linking the silicon and the aromatic hydrocarbon, and  $R^2$ ,  $R^3$ , and  $R^4$  are one or more of hydrogen, alkyl, and alkoxy, with the provision that no more than two may be hydrogen or alkyl.
